Preface	iii
International Association for Fire Safety Science	v
In Memoriam – Wolfram Becker	ix
In Memoriam – George Tumura	xi
In Memoriam – Ove Pettersson	xiii
In Memoriam – Jonathan Sime	xv
Symposium Committees	xvii
Reviewers	xix
Session Chairs	xxi

Emmons Plenary Lecture

Thermal Glass Breakage	P. J. Pagni, University of California, Berkeley, USA	3
------------------------	--	----------

Invited Lectures

Initial Model for Fires in the World Trade Center Towers	R. G. Rehm, W. M. Pitts, H. R. Baum, D. D. Evans, K. Prasad, K. B. McGrattan, and G. P. Forney, NIST, Building and Fire Research Laboratory, USA	25
--	--	-----------

Evaluation of the Hazard of Fire Resistant Materials Using Measurements from Laboratory and Parallel Panel Tests	R. L. Alpert, FM Global Research, USA	41
--	---------------------------------------	-----------

Fully Involved Enclosure Fires: Effects of Fuel, Type, Fuel Area and Geometry	M. A. Delichatsios and G. W. H. Silcock, Fire SERT, University of Ulster, Northern Ireland	59
---	--	-----------

Historic Industrial Fires and Their Influence on Contemporary Fire Protection	R. Zalosh Worcester Polytechnic Institute, USA	75
---	--	-----------

ASET and RSET: addressing some issues in relation to occupant behaviour and tenability	D. Purser, FRS, BRE Ltd., Garston, UK	91
--	---------------------------------------	-----------

Invited Panel on New Fire Laboratories

The New FM Global Technology Center	P. M. Croce, FM Global Research, USA	105
-------------------------------------	--------------------------------------	------------

University of Ulster, FireSERT's New Laboratories	T. J. Shields, University of Ulster, UK	
---	---	--

The Bureau of Alcohol, Tobacco, and Fire Arms (ATF) Fire Research Laboratory	K. D. Steckler, Bureau of Alcohol, Tobacco and Firearms, USA	109
--	--	------------

Laboratorio de Ensayo de Resistencia al Fuego	J. De Dios Rivera, Pontificia Universidad Católica de Chile, Chile; P. Matamala, Laboratorio de Resistencia al Fuego, DICTUC, Chile; J. L. Torero, The University of Edinburgh, UK	111
---	--	------------

University of Waterloo Live Fire Research Facility	E.J. Weckman, D.A. Johnson and A.B. Strong, University of Waterloo, Ontario, Canada	113
--	---	------------

Flame Spread

Upward Flame Spread: Heat Transfer to the Unburned Surface	K-C. Tsai, J. Turnbull, G. Will, and D. Drysdale, University of Edinburgh, UK	117
--	---	------------

A Physically-Based Model for Urban Fire Spread	K. Himoto and T. Tanaka, Kyoto University, Japan	129
--	--	------------

Surface Temperature Measurement of Flame Spread Using Thermographic Phosphors	A. Omrane, F. Ossler, M. Aldén, U. Göransson, and G. Holmstedt, Lund University, Sweden	141
---	---	------------

PIV Measurements of Flow Structures Created by a Pulsating Flame Spread Over 1-Propanol	M.I. Hassan, K. Kuwana, and K. Saito, University of Kentucky, USA; and T. Hirano, National Research Institute of Fire and Disaster, Japan	153
---	---	------------

Numerical Simulation of Wind-Aided Turbulent Fires in a Ventilated Model Tunnel	H.Y. Wang and P. Joulain, Université de Poitiers, France	161
---	--	------------

Fire Detection

Development of a Smoke Transport Model to Enhance the Certification Process for Cargo Bay Smoke Detection Systems	S.P. Domino, P.E. DesJardin, and J. Suo-Anttila, Sandia National Laboratories, USA	175
---	--	------------

Predicting Smoke Detector Activation Using the Fire Dynamics Simulator	V.T. D'Souza, J.A. Sutula, S.M. Olenick, W. Zhang, and R.J. Roby, Combustion Science and Engineering, Inc., USA	188
--	---	------------

Alarm Thresholds for Smoke Detector Modeling	J.A. Geiman and D.T. Gottuk, Hughes Associates, USA	197
--	---	------------

Light Scattering Characteristics and Size Distribution of Smoke and Nuisance Aerosols	D.W. Weinert, Victoria University of Technology, Australia; T.G. Cleary and G.W. Mulholland, NIST Building and Fire Research Laboratory, USA; and P.F. Beever, New Zealand Fire Service, New Zealand	209
---	--	------------

Brillouin Scattering Based Distributed Fiber Optic Temperature Sensing for Fire Detection	Z. Liu and A. Kim, National Research Council, Canada; and G. Ferrier, X. Bao, X. Zeng, and Q. Yu, University of Ottawa, Canada	221
---	--	------------

Fire Physics

Effects of Flue Spaces on the Initial In-Rack Plume Flow	H. Ingason, Swedish National Testing and Research Institute (SP), Sweden	235
--	--	------------

Explosive Volume Formation From the Release of Vapors or Liquids in Enclosures	F. Tamanini, FM Global Research, USA	247
Similarity of Turbulent Wall Fires	J. L. de Ris, G. H. Markstein, L. Orloff, and P. A. Beaulieu, FM Global Research, USA	259
Application of Laser Doppler Velocimetry (LDV) to Study the Structure of Gravity Currents Under Fire Conditions	B. Moghtaderi, University of Newcastle, Australia	271
Numerical Evaluation of the Influence of Fuel Generation on the Geometry of a Diffusion Flame: Implications to Micro-Gravity Fire Safety	S. Rouvreau and P. Cordeiro, P. Joulain, ; H-Y. Wang, Laboratoire de Combustion et de Detonique, France; and J.L. Torero, University of Edinburgh, UK	283
Determination of the Equivalence Ratio During Fire: Comparison of Techniques	B. Andersson, G. Holmstedt, and A. Dagneryd, Lund University, Sweden	295
Risk and Decision Analysis		
Development of Seismic-Induced Fire Risk Assessment Method for a Building	A. Sekizawa, National Research Institute of Fire and Disaster, Japan; and M. Ebihara and H. Notake, Izumi Research Institute, Shimizu Corporation, Japan	309
Time-Dependent Event-Tree Method for Fire Risk Analysis: Tentative Results	T. Korhonen, J. Hietaniemi, D. Baroudi, and M. Kokkala, VTT Technical Research Centre of Finland, Finland	321
Stochastic Modeling for Risk Assessment	Y. He, M. Horasan, P. Taylor, and C. Ramsay, Scientific Services Laboratory, Australia	333
Decision Analysis Concerned with Investments in Fire Safety	H. Johansson, Lund University, Sweden	345

Preliminary Analysis of the Number of Occupants, Fire Growth, Detection Times and Pre-Movement Times for Probabilistic Risk Assessment	D. Charters and D. McGrail, Arup Fire, UK; N. Fajemirokun and Y. Wang, University of Manchester, UK; N. Townsend, London Fire and Emergency Planning Authority, UK; and P. Holborn, Southbank University, UK	357
--	--	------------

Compartment Fires

An Interrogation of the MQH Correlation to Describe Centre and Near Corner Pool Fires	M.A. Azhakesan, T.J. Shields, and G.W.H. Silcock, University of Ulster, Ireland; and J.G. Quintiere, University of Maryland, USA	371
Numerical Modeling of Pool Fires Using LES and Finite Volume Method for Radiation	S. Hostikka, VTT Building and Transport, Finland; and K.B. McGrattan and A. Hamins, NIST Building and Fire Research Laboratory, USA	383
Modelling CO Production in Vitiated Compartment Fires	S.M. Hyde and J.B. Moss, Cranfield University, UK	395
Aerodynamic Characterization of a Compartment Fire as a Function of Its Behavior	M. Coutin and J.M. Most, Laboratoire de Combustion et de Détonique, France	407
Corner Fire Growth in a Room With a Combustible Lining	B.Y. Lattimer, S.P. Hunt, M. Wright, and C.L. Beyler, Hughes Associates, Inc., USA	419
A Formula for Prediction of Ceiling Jet Temperature in Two Layer Environment	J. Watanabe, S. Shimomura, and A. Youichi, Matsushita Electric Works, Japan; and T. Tanaka, Kyoto University, Japan	431

Automatic Sprinklers

Comparison of Actual Delivered Density and Fire Suppression Effectiveness of Standard and Conventional Sprinklers in Rack-Storage Fires	T-S. Chan and H-C. Kung, FM Global Research, USA	445
---	--	------------

Reduced-Scale Experiments on the Water Suppression of a Rack Storage Commodity Fire for Calibration of a CFD Fire Model	A. Hamins and K. McGrattan, NIST Building and Fire Research Laboratory, USA	457
Application of Water Sprays to Industrial Oil Cooker Fire	S. Nam, FM Global Research, USA	469
The Effect of Evaporative Cooling on the Activation Time of Fire Sprinklers	P. Ruffino and M. di Marzo, University of Maryland, USA	481
Fire Protection for Non-Storage Occupancies with High Ceiling Clearances	S. Nam, A. Braga, H-C. Kung, and J.M.A. Troup, FM Global Research, USA	493

Suppression

On the Determination of Soot and Droplet Concentration and Velocity Fields During the Addition of a Water Mist on a Liquid Pool Fire at Laboratory Scale	J. Richard, J.P. Garo, J.M. Souil, and J.P. Vantelon, Laboratoire de Combustion et de Détonique, France	507
An Extrapolation Methodology for Pool Fire Extinguishment by Local Application Water Mist Systems	H-Z. Yu and P.H. Dobson, FM Global, USA; R. Ferron, FM Approvals, USA; and C. Barsamian, M. Hanna, and V. Gameiro, Securiplex Inc., Canada	519
Numerical Investigations of CO ₂ as Fire Suppressing Agent	V.R. Katta, Innovative Scientific Solutions, USA; F. Takahashi, NASA Glenn Research Center, USA; and G. Linteris, NIST Building and Fire Research Laboratory, USA	531

Materials Fire Behavior

Understory Burning in Stands of Mason's Pine	D. Wu, S. Yi, and A. Liu, Southwest Forestry College, China; and S. Liu and M. Cai, Forest Fire Office of Simao Prefecture, China	545
--	---	------------

Numerical Simulation of the Propagation of a Surface Fire Through a Mediterranean Shrub	D. Morvan and J.L. Dupuy, Université de la Méditerranée, France	557
Evaluation of Dimensionless Flame Height Parameters to Account for Fuel Source Effects	J.J. Alston, Arup Fire, USA; and N.M. Dembsey, WPI, USA	569
Kinetic Compensation Effect in the Thermal Decomposition of Biomass in Air Atmosphere	N. Liu, B. Wang, and W. Fan, University of Science and Technology of China, China	581
Size Constraints on Self Ignition of Charcoal Briquets	F.C. Wolters, P.J. Pagni, T.R. Frost, and B.R. Cuzzilo, University of California at Berkeley, USA	593
Comparison of Competitive and Non-Competitive Char Formation in Polymer Combustion	S.D. Watt, J.E.J. Staggs, A.C. McIntosh, and J. Brindley, University of Leeds, UK	605
The Effect of Paint on the Ignition Resistance of Plywood and Chipboard	J. Staggs, H.N. Phylaktou, and R.E. McCreadie, University of Leeds, UK	617
Effects of the Generic Nature of Polymers on Their Fire Behavior	G. Marlair, INERIS, France; and A. Tewarson, FM Global Research, USA	629
Special Applications		
Modelling of Fires Following Bursts of Pressurized Fuel Tanks	G.M. Makhviladze, University of Central Lancashire, UK; and S.E. Yakush, Russian Academy of Sciences, Russia	643
Large Scale Fire Tests of a 4-Story Type Car Park	T. Hirashima, Y. Wang, H. Uesugi, Chiba University, Japan; T. Kitano, Sankensetsubi Corporation, Japan; and T. Ave, Tokyo Institute of Technology, Japan	655

Modelling of Foam Spread on a Burning Liquid Fuel Surface	B. Persson, A. Lönnermark, and H. Persson, Swedish National Testing and Research Institute (SP), Sweden	667
Study on the Estimation of the Hazard to Evacuation Due to Wind-Blown Fire Flow Induced by Urban Fire	M. Nakao and T. Tanaka, Kyoto University, Japan	679
Post-Earthquake Fire Spread Between Buildings Estimating and Costing Extent in Wellington	G.C. Thomas, and D.A. Lloyd, Victoria University of Wellington, New Zealand; W.J. Cousins, D.W. Heron and S. Mazzoni, Institute of Geological and Nuclear Sciences, New Zealand	691
Fire Suppression and Re-ignition Prevention in a Full-Scale Engine Nacelle Simulator	A. Hamins, T. Cleary, and J. Yang, NIST Building and Fire Research Laboratory, USA	703
Cold Discharge of CF ₃ I in a Simulated Aircraft Engine Nacelle	J.C. Yang, S.L. Manzello, M.R. Nyden, NIST Building and Fire Research Laboratory, USA; and M.D. Connaghan, U.S. Army CECOM Research, Development, and Engineering Center, USA	715
Smoke Control		
Air Entrainment into Mechanical Smoke Vent on Ceiling	D. Nii, K. Nitta, and K. Harada, Kyoto University, Japan; and J. Yamaguchi, Obayashi Corporation, Japan	729
Influence of Doorway Opening Conditions on Vestibule Pressurization Smoke Control in Office Buildings	M. Kujime, Nikken Sekkei, Ltd., Japan; T. Matsushita, Kobe University, Japan; and T. Tanaka, Kyoto University, Japan	741
Mitigation of Wind Effects on the Performance of Pressurization Systems in High-Rise Buildings	M. Poreh, S. Trebukov, T. Gurevitz, Technion -Israel Institute of Technology, Israel	753

Performance-Based Design

We Don't Know What We Don't Know	A.N. Beard, Heriot-Watt University, UK	765
Performance-Based Provisions for Fire Safety in the Japanese Building Standard Law: How to Connect Regulation and Engineering	N. Takeichi, Takenaka Corporation, Japan; I. Hagiwara, National Institute for Land and Infrastructure Management; H. Kazunori, Kyoto University; M. Tsujimoto, Nagoya University; and W. Takahashi, ING Company, Ltd., Japan	777

Test Methods and Modeling

A New Test Method for Rating Materials as Noncombustible	R.L. Alpert and M.M. Khan, FM Global Research, USA	791
Improved Method for Analyzing Ignition Data from the Cone Calorimeter in the Vertical Orientation	M.L. Janssens, Southwest Research Institute, USA	803
Uniformity of Radiant Heat Fluxes in Cone Calorimeter	M.T. Wilson, B.Z. Dlugogorski, and E.M. Kennedy, University of Newcastle, Australia	815
Improved Radiation and Combustion Routines for a Large Eddy Simulation Fire Model	K. McGrattan, J. Floyd, G. Forney, and H. Baum, NIST Building and Fire Research Laboratory, USA	827
Experimental Verification of the Fire Dynamics Simulator Hydrodynamic Model	J.M. Clement, Holmes Fire and Safety, Australia; and C. Fleischmann, University of Canterbury, New Zealand	839
A Multi-Layer Zone Model for Predicting Fire Behavior in a Single Room	K. Suzuki, Shimizu Corporation, Japan; and K. Harada and T. Tanaka, Kyoto University, Japan	851

Human Behavior Data

The AASK Database V3.0: A Database of Human Experience During Aircraft Evacuation Incidents E.R. Galea, K.M. Finney, A.J.P. Dixon, D.P. Cooney, and A. Siddiqui, University of Greenwich, UK **865**

The Collection of Pre-Evacuation Times from Evacuation Trials Involving a Hospital Outpatient Area and a University Library Facility S. Gwynne, E.R. Galea, J. Parke, and J. Hickson, University of Greenwich, UK **877**

Flame Behavior

Experimental Study on Flame Merging Behavior from 2 by 3 Configuration Model Fire Sources O. Sugawa, Tokyo University of Science, Japan; and Y. Oka, Yokohama National University, Japan **891**

An Experimental Study of Ejected Flames and Combustion Efficiency T. Yamada, K. Takanashi, E. Yanai, T. Suzuki, and A. Sekizawa, National Research Institute of Fire and Disaster, Japan; H. Satoh and H. Kurioka, Kajima Technical Research Institute, Japan **903**

Effect of Cross-Winds to Apparent Flame Height and Tilt Angle from Several Kinds of Fire Source Y. Oka, Yokohama National University, Japan; O. Sugawa, Tokyo University of Science, Japan; T. Imamura, Yokohama National University; and Y. Matsubara, National Research Institute of Fire and Disaster, Japan **915**

Evaluation of the Correlated-K and Other Gas Radiation Models for Combustion Applications S. Dembele, J. Zhang, and J. Wen, Kingston University, UK **927**

Human Behavior Modeling

Grid Flow: an object-oriented building evacuation model combining pre-movement and movement behaviours for performance-based design	M. Bensilum, Consultant, UK; and D. Purser, Building Research Establishment, UK	941
Design Occupant Groups Concept Applied to Fire Safety Engineering Human Behaviour Studies	M.B.N. Horasan, Scientific Services Laboratory, Australia	953
Evacuation Simulation System Considering Evacuee Profiles and Spatial Characteristics	S. Uehara, Takenaka Corporation, Japan; and K. Tomomatsu, Kozo Keikaku Engineering, Japan	963
Design Fires for Means of Egress in Office Buildings Based on Full-Scale Fire Experiments	S. Kakegawa and Y. Yashiro, Shimizu Corporation, Japan; H. Satoh and H. Kurioka, Kajima Technical Research Institute, Japan; I. Kasahara and Y. Ikehata, Taisei Corporation Technology Center, Japan; and N. Saito and T. Turuda, National Research Institute of Fire and Disaster, Japan	975

Structures - Columns

Experimental Flame Heat Transfer Correlations for a Steel Column Adjacent to and Surrounded by a Pool Fire	D. Kamikawa and Y. Hasemi, Waseda University, Japan; T. Wakamatsu, Kumagai-gumi Company, Japan; and K. Kagiya, National Institute for Land Infrastructure Management, Japan	989
Structural Performance of High Strength Concrete Columns in Fire	F. A. Ali, A. Nadjai, P. Glackin, and G. Silcock, University of Ulster, UK; and A. Abu-Tair, Al-Qudus University, Jerusalem	1001

A Model for Evaluating the Fire Resistance of High Performance Concrete Columns	V.K.R. Kodur and M.A. Sultan, National Research Council, Canada; T.C. Wang and F.P. Cheng, National Chiao Tung University, Taiwan	1013
---	---	-------------

Analyses of the Impact of Loss of Spray-Applied Fire Protection on the Fire Resistance of Steel Columns	J.A. Milke, University of Maryland, USA; N. Ryder, Combustion Science and Engineering, Inc., USA; and S. Wolin, Code Consultants, Inc., USA	1025
---	---	-------------

Statistics and Probability

An Analysis of Residential Arson Fires in Norway	J.P. Stensaas and A.S. Hansen, Norwegian Fire Research Laboratory, Norway	1039
--	---	-------------

The Ignition Frequency of Structural Fires in Finland 1996-1999	K. Tillander and O. Keski-Rahkonen, VTT Building and Transport, Finland	1051
---	---	-------------

Probability Distribution of Fire Losses	A.M. Hasofer and I.R. Thomas, Victoria University of Technology, Australia	1063
---	--	-------------

An Analysis of High-Rise Building Fires and Human Firesafety Consciousness through Fire Statistics and Field Survey	R. Ono, Technological Research Institute of São Paulo State, Brazil	1073
---	---	-------------

Injuries and Fatalities in Apartment Building Fires	I. Thomas and P. Brennan, Victoria University of Technology, Australia	1085
---	--	-------------

Structures - Structures and Building Components

Heating Mechanism of Unprotected Steel Beam Installed Beneath Ceiling and Exposed to a Localized Fire: Verification using the real-scale experiment and effects of the smoke layer	T. Wakamatsu, Kumagai Gumi Company, Japan; Y. Hasemi, and D. Kamikawa, Waseda University, Japan; and K. Kagiya, National Institute for Land and Infrastructure Management	1099
--	---	-------------

Thermal Expansion of Wood and Timber-Concrete Composite Members Under ISO-Fire Exposure	A. Frangi and M. Fontana, ETH Zurich, Switzerland	1111
Fire Resistance of Wood-Framed Exterior Walls: The Effect of an External Air Cavity and External Insulation	H. Takeda, FARINTEC, Canada	1123
Fire Behavior of Slender Precast Concrete Walls	L.C.S. Lim and A.H. Buchanan, University of Canterbury, New Zealand	1135
Investigation of a Large Wooden Gymnasium Fire: Its documentation, estimation of the fire scenario by experiments and evaluation of the structural properties of surviving timber elements	K. Kagiya, National Institute for Land and Infrastructure Management; Y. Hasemi and D. Nam, Waseda University; A. Hokugo, Kobe University; H. Masuda, Building Research Institute; and T. Harada, A. Miyatake and Y. Hiramatsu, Forestry and Forest Products Research Institute	1147

POSTERS

Invited Posters

INVITED POSTER: Assembling the Heat Release Rate Curve for Fire Modeling	C. Fleischmann, University of Canterbury, New Zealand	1161
INVITED POSTER: Fire Service Casualties in Structural Fires	R.F. Fahy, NFPA, USA	1163
INVITED POSTER: ASCE/FEMA Investigation of the World Trade Center Attack	J.R. Barnett, Worcester Polytechnic Institute, USA	1165
INVITED POSTER: Heat Release Capacity: A Molecular-Level Fire Response Parameter	R.E. Lyon, Federal Aviation Administration, USA; and R. N. Walters, Galaxy Scientific Corporation, USA	1167

Flame Spread

CFD Prediction of the Ventilation Effect on Cable Flame Spread	P. Blomqvist, J. Axelsson and P. Van Hees, Swedish National Testing and Research Institute (SP), Sweden; and G. Lannedgrand, University of Valenciennes, France	1169
--	---	-------------

Fire Detection

CFD Modeling of Aerosol Entry in Simplified Smoke Detector Geometries	J.A. Ierardi and J.R. Barnett, Worcester Polytechnic Institute, USA	1170
---	---	-------------

Fire Physics

The Verification of CFD Simulations of Deflagration in a Closed Vessel	V.V. Molkov and D.V. Makarov, University of Ulster, UK	1171
--	--	-------------

Whirlwinds in the Downwind Side of Fire	M. Shinohara and K. Kudo, Hokkaido University, Japan; and K. Satoh, National Research Institute of Fire and Disaster, Japan	1172
---	---	-------------

Ceiling Jet in Underventilated Pool Fire Compartment: Experimental Study From Large Scale Tests	H. Pretrel, J. Lazardeux, and J.M. Such, Institut de Radioprotection et de Surete Nucleaire, France	1173
---	---	-------------

Fire Plumes in Transportation Tunnels Using Longitudinal Ventilation Systems	Y. Wu and M.Z.A. Bakar, Sheffield University, UK	1174
--	--	-------------

Baroclinic Vorticity Generation Model of Buoyant Turbulence for Pool Fires	V.F. Nicolette and S.R. Tieszen, Sandia National Laboratories, USA	1175
--	--	-------------

Mixing Structures and Transport Behavior in Buoyant Plumes	A.W. Marshall, A. Trouvé, T. Ma, and X. Yao, University of Maryland, USA	1176
--	--	-------------

Risk and Decision Analysis

- A “Factorial Design” Approach to the Performance-Based Design Process with Uncertainty D. Beller, National Fire Protection Association, USA **1177**
-

Compartment Fires

- An Experimental Study on Prevention of Upward Fire Spread Caused by Hot Gas Ejected Out Through Opening From Fire Room in a High-Rise Apartment Building T. Suzuki, T. Yamada, A. Sekizawa, K. Takanashi, E. Yanai, N. Abe, and H. Kurioka, National Research Institute of Fire and Disaster, Japan; and H. Satoh, Kajima Technical Research Institute, Japan **1178**
-

- Flame Exhaust and External Burning in Enclosure Fire A.Y. Snegirev, G.M. Makhviladze, A.V. Chamchine, and P.H. Metcalfe, University of Central Lancashire, JK; and V.A. Talalov, Saint-Petersburg State Technical University, Russia **1179**
-

- Underventilated Compartment Fires – a 1.5 M Euro EC Funded Project J.X. Wen, Kingston University, UK **1180**
-

- On the Prevention of Building Destruction by Fire-Related Deflagrations V. Molkov, A. Grigorash, and D. Makarov, University of Ulster, UK **1181**
-

- Overpressure Peaks Induced at Ignition by Large Pool Fires in Confined and Forced Ventilation Compartment H. Pretrel, J.M. Such, Institut de Radioprotection et de Sûreté Nucléaire, France; and, J. Poniatowski, Ecole Nationale Supérieure de Mécanique et d.Aérotechnique, France **1182**
-

- Post-Test Computations of the Virginia Tech Propane Fire Compartment Study Using FDS v2 J. Floyd, NIST Building and Fire Research Laboratory, USA, and C. Wieczorek and U. Vansburger, Virginia Polytechnic Institute and State University, USA **1183**

A Multiblock Technique for Simulating Fire and Smoke Spread in Large Complex Enclosures	K. Prasad, G. Patnaik and K. Kailassnath, Naval Research Laboratory, USA	1184
---	--	-------------

Material Fire Behavior

Band Assignments of ¹ H-NMR in Pinewood Pyrolysed Materials	L.S. Vasanthakumar and G.W. Silcok, University of Ulster, UK	1185
--	--	-------------

Measurement of Soot Extinction Coefficients	J. Widmann, J.C. Yang, G.W. Mulholland, and A. Hamins, NIST Building and Fire Research Laboratory, USA	1186
---	--	-------------

Thermal Decomposition of Polymers and Construction Materials: Experimental Kinetic Studies and Improved Pyrolysis Models	J. Svenson and J.B.C. Pettersson, Goteborg University, Sweden; P. Blomqvist and P. Van Hees, Swedish National Testing and Research Institute (SP), Sweden; and U. Goransson and G. Holmstedt, Lund University, Sweden	1187
--	---	-------------

An Example of the Use of Standard Flammability Criteria for Performance Analysis of Materials: Polycarbonate and PMMA	O. Mångs and J.L. Torero, University of Maryland, USA; L. Audouin and C. Casselman, Institut de Protection et de Surete Nucleaire, France; and D. Morvan, UNIMECA, France	1188
---	---	-------------

Automatic Sprinklers

Water Spray Suppression and Intensification of Hydrocarbon Pool Fires	S-P. Ho and R. Zalosh, and H-Z Yu, Worcester Polytechnic Institute, USA	1189
---	---	-------------

Fireballs Induced by Pool Fire Suppression Demonstrate the Need for Personnel Protection	J.Z. Su, A.K. Kim, and G.P. Crampton, National Research Council, Canada	1190
--	---	-------------

Suppression

Implications of Nanoscale Water Mist in Fire Suppression Within Electronic Data Centers	K.C. Adiga, ApTech Research Center, USA; and H. D. Ladouceur, Naval Research Laboratory, USA	1191
---	--	-------------

Smoke Control

Passive Smoke Control of Stairwells	S. Trebukov and M. Poreh, Technion – Israel Institute of Technology, Israel	1192
-------------------------------------	---	-------------

Special Applications

Lightning-Caused Forest Fires in Alaska	H. Hayasaka, Hokkaido University, Japan	1193
---	---	-------------

Studies on the Mechanisms of Greenbelt System in Stopping Fire Spread	A. Liu, D. Wu, and X. He, Southwest Forestry College, China; and M. Fu and Y. Hong, Forest Fire Office of Simao Prefecture, China	1194
---	---	-------------

A Rise of Risk of Very Large Forest Fires After 1987 in China	W.G. Song, W.C. Fan, and L.C. Zhao, University of Science and Technology of China, China; L.F. Shu, Chinese Academy of Forestry, China	1195
---	--	-------------

Secondary Dust Cloud Formation from an Initiating Blast Wave	T. Scherpa and R. Zalosh, Worcester Polytechnic Institute, USA	1196
--	--	-------------

Firebrand Combustion	J. Woycheese, Worcester Polytechnic Institute, USA; and P.J. Pagni, University of California at Berkeley, USA	1197
----------------------	---	-------------

Analyses of Mobile Equipment Fires for All U.S. Surface and Underground Coal and Non-Coal Mining Categories, From 1990 Through 1999	M.I. De Rosa, National Institute for Occupation Safety and Health, USA	1198
---	--	-------------

Identification and Prioritization of Fire Research Needs	M.J. Hurley, Society of Fire Protection Engineers, USA; and G. Cox, Building Research Establishment, UK	1199
--	---	-------------

International Network for Fire Information and Reference Exchange (inFIRE): Library-to-Library Information Services: Making Your Library More Effective for You	T. Frydryk, NFPA, USA; J. Green, FM Global Research, USA; and M. Gunnarson, Worcester Polytechnic Institute, USA	1200
---	--	-------------

Performance-Based Design

Development and Validation of a Integrated Model for Flame Spread and Toxic Products in Full Scale Tests	S. Welch and N.R. Marshall, Building Research Establishment, UK	1201
--	---	-------------

Development and Validation of Integrated Fire Modelling Methodology for Smoke Ventilation Design and Hazard Assessment in Large Buildings	S. Kumar, R. Chitty and S. Welch, Building Research Establishment, Garston, Watford, UK	1202
---	---	-------------

Experimental Study of Smoke Movement in a Large Building for Model Validation	N.R. Marshall, S. Kumar, D.A. Smith, and C. Goodall, Building Research Establishment, UK	1203
---	--	-------------

The Effect on Evacuation Safety and Fireproofing Cost by the Installation of Evacuation Space and the Reliability of Fire Prevention Devices	M. Nakano, Konoike Construction, Japan; and Y. Murosaki, Kobe University, Japan	1204
--	---	-------------

Upgrading Fire Scenarios From Typical Vehicles and Their Loads in the Context of Road Tunnels	C. Cwiklinski, G. Marlair, and E. Ruffin, INERIS, France; and D. Lacroix, Centre d'Etudes des Tunnels, France	1205
---	---	-------------

Test Methods and Models

Simulation of Smoke Production in Large-Scale Fire Tests Based on Small-Scale Test Results Using Multivariate Statistical Analysis to Enhance Predictability	A.S. Hansen, Norwegian Fire Research Laboratory (SINTEF), Norway; and P.J. Hovde, Norwegian University of Science and Technology, Norway	1206
--	--	-------------

Simulation of Large Hydrocarbon Pool Fires on Massively Parallel Computers	P. J. Smith, R. Rawat, J.P. Spinti, and W. Yee, University of Utah, USA	1207
The Analysis of Uncertainties in the Measurement of Rate of Heat Release by Oxygen Consumption Revisited	S. Brohez and C. Delvosalle, Faculté Polytechnique de Mons, Belgium; and G. Marlair, INERIS, France	1208
A Simple Formula to Predict Temperature Rise of Protected and Unprotected Structural Steel Elements	K. Harada, Kyoto University, Japan; S. Yusa and Y. Ohmiya, Building Research Institute, Japan; and J. Szuki, T. Ishihara, M. Shimamura, and T. Wakamatsu, Tokyo University of Science, Japan	1209
Simple Estimation Method on Ceiling Jet Temperature, Velocity and Smoke Concentration	G. Yaegashi and O. Sugawa, Tokyo University of Science, Japan; and Y. Matsubara, D. Kohzeki, and H. Tamura, National Research Institute of Fire and Disaster, Japan	1210
Human Behavior		
Situational Awareness as a Pivotal Factor in Human Behavior in Fire	S.F. Walsh, Anna Maria College, USA	1211
Design Behavioral Scenarios for Fire Safety Engineering	D. Purser, Building Research Establishment, UK	1212
Structures		
Methods for Designing Very High Steel-Framed Walls for Fire	D. Dhima and X.E. Bodart, CSTB, France	1213
Statistics and Probability		
Favelas under Viaducts and Bridges of São Paulo City: The Fires, Causes and Consequences	M. L. Mitidieri, Technological Research Institute of Sao Paulo State, Brazil	1214
